This seminar course is intended to review and to stimulate discussion about the current status of our knowledge about neurodegenerative diseases, emphasizing distinctions between pathological and healthy brain aging. While the main focus is on the etiology, neurobiology, and emergent symptoms of the diseases, broader biological, sociological, and historical perspectives are woven into the material. Seminar format including lectures, discussions, student presentations, and a variety of written assignments. Meets with BIO 400-001.

32797	SEC M001	MW	05:15PM-06:35PM	Staff		3.0		Meets with CHE/PHY 638 A seminar on the critical analysis of the current literature on interfaces, whereby we will define the frontiers of interface research by identifying unsolved problems. Small interdisciplinary groups will scour online databases for \dot{h} ot, articles or research groups associated with a particular research topic (e.g., biomaterial interfaces relevant to a particular disease or injury; fundamental interface problems in soft matter physics; techniques for patterning surfaces; mechanisms for bacterial biofilm control; novel mechanisms for drug delivery) ultimately selecting a single paper to be pitched to the entire class for in-depth consideration by all. Following this selection, several students will lead the discussion of the article. The class will critically analyze the paper and end with updating a developing list of unsolved problems. This course goes beyond traditional seminar or paper classes by developing appreciation for the process of defining a research project in the context of friendly, interdisciplinary debate that fosters improved scientific communication. Near the end of the course teams will be asked to prepare a concrete research proposal to be refereed by the class. The diverse composition of the teams will challenge the students to find ways of taking advantage of their different expertise and will provide a taste of team grant-writing. Offered every year in the Spring semester.

We use models to make predictions, to evaluate scenarios, and to better understand how a given system functions. This course will cover the use of earth systems models, drawing some examples from hydrology but suited for a broad audience. Course topics will include parameter estimation, uncertainty analysis, sensitivity analysis, optimization, and visualization. The course will be taught in Matlab; a background in Matlab or R is generally recommended.

Examine three controversial policy issues marijuana legalization, gun control and Second Amendment Rights, and climate change with the goal of understanding how these policies and related political debates developed. Understand how controversies surrounding these issues shape the policy process and how this differs from our conventional understanding of democratic policy development through compromise and agreement. To guide our analysis, rely on theories of policymaking and policy change as well as theories of democratic responsiveness. Learn the fundamentals of these theories and apply them to the current debates surrounding marijuana legalization, gun control, and climate change.
